Landlite HIGHWAY LED Street Light Range

The Landlite HIGHWAY LED range is a high quality LED Street Light with an option for all your needs. These fittings are designed with a modern and sleek style, ranging from 50W to 120W. The bracket can be twisted to allow you change the tilt on the fitting or to change them from rear entry to bottom entry, removing the need for extra brackets. All options are supplied with a photo cell socket on the back and then both a photocell head and a dummy head in the box, meaning each fitting can be used with the photocell or off a switch bypassing the photocell. These fittings offer a smooth down facing light to help reduce light pollution
